For Release 9 a.m. EST, December 13, 2004

more

Vehicle Product Development Capability

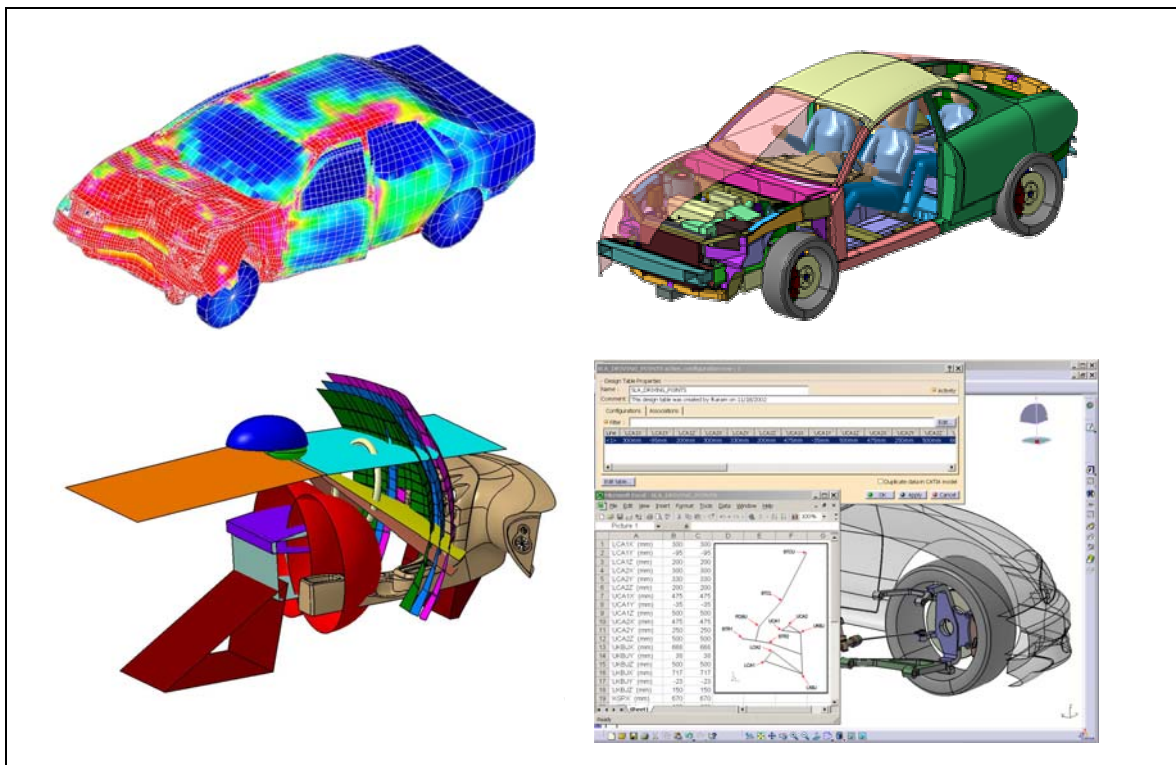

This facility will offer a full suite of comprehensive Vehicle Development Solutions:

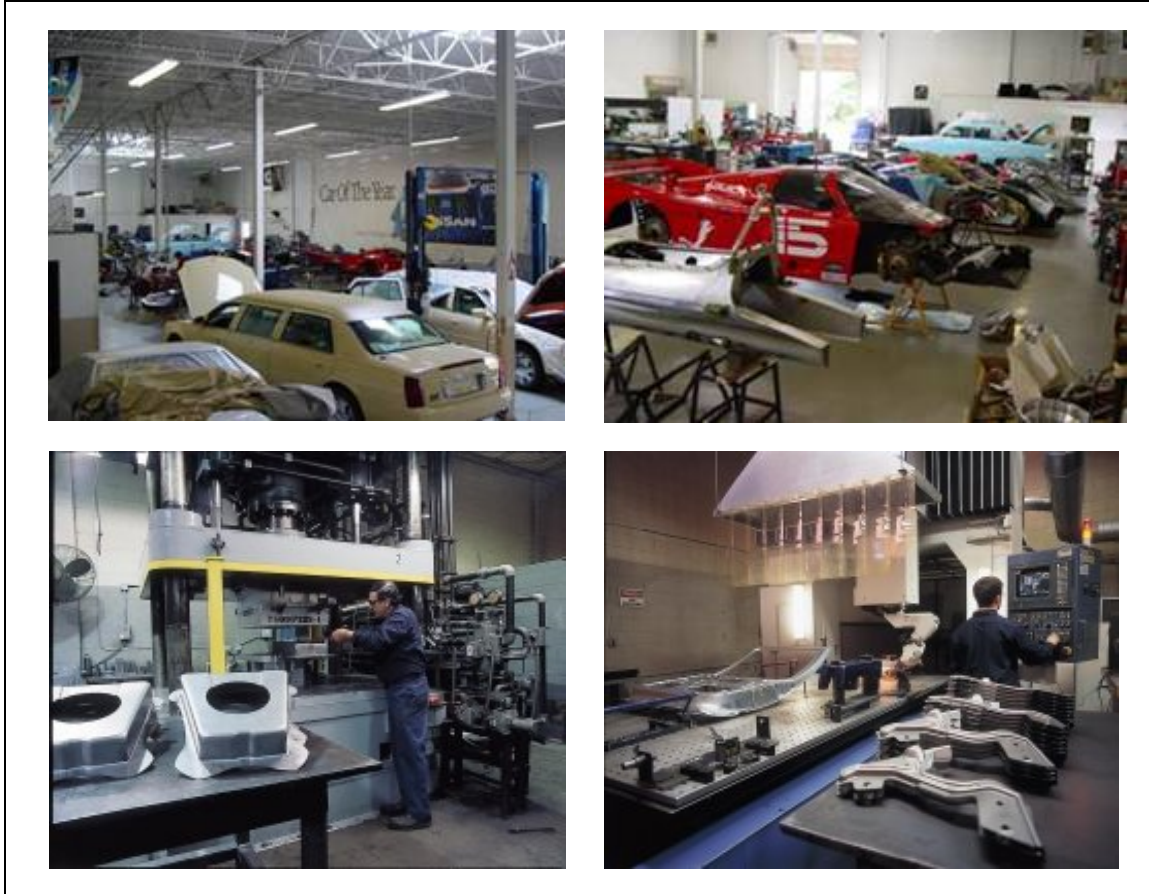

Vehicle Solutions: Program Accountability, Specialty Vehicle Initiatives, Cost Management Programs, Vehicle Design & Development, Structural Composite Solutions, Systems Integration & Packaging, DFA/DFM Modular Design, VA/VE Efforts

Engineering Services: Concept & Styling Initiatives, Product Design & Engineering, Simultaneous Engineering, Legacy Data Conversion, Complex Model Development, Detail Drawing Creation, Class 'A' Surfacing, CAE Services

CAE Services: Crash & Impact Analysis, Virtual Vehicle Simulations, Motion Simulations, (NVH) Noise, Vibration, & Harshness, Occupant Safety Analysis, Structural Analysis, Thermal Analysis, Durability Analysis

Vehicle Build Capability: Mock-Ups, Prototype Build & Validation, Extensive Vehicle Development, Concept Cars, Low Volume Manufacturing, Custom Fabrication, CNC Machining, Engine Rebuilding, Powertrain Calibration, Body Refinishing

Engineering Solid Solutions, Inc.

ESS is a full-service Product Development firm specializing in high-end engineering applications for vehicle development. ESS has assisted numerous clients in bringing new products to the marketplace. The scope of their work ranges from turnkey assignments to any single aspect of the product development process. Their approach to product development stems from successfully combining high-end analytical engineering tools with traditional engineering practices and principles. ESS builds their relationships with customers that focus on increased product awareness, reducing development costs, and a return on investment. Contact ESS at 248-735-0403, or on the web at www.essweb.com.
